

AGRICULTURAL SHIELD

MODEL LW301

The agricultural version of the TOTAL SHIELD is a power-booster used directly on the field to stimulate biological energy and create a balanced harmony in the soil. This results in improved quality of your crops.

The Agricultural Shield gathers cosmic energy into the large Tesla coil antenna running the full length of the shield. This modulated energy is coupled to the bottom of the Tesla antenna, where it is broadcast horizontally in a circular pattern through the soil to the roots of the plants. The bottom of the agricultural shield should be buried 6 inches in the soil. (For indoor use, either hang the unit or place it in a 5-gallon bucket of sand for stability.)

Without a power source, the Shield will be effective in an area of about 2 acres. With power, the unit effectively pumps the energy at an amplified level to increase the coverage to 5 to 6 acres. This pumping rate vibrates at the earth's own resonance when in the EP position. In the GW position, the pumping action is at the same rate as the incoming energy. During the growing season, you will find best results using the GW position if rainfall is normal. When rainfall is below normal, use the "both" position. Near harvest, you would want to switch to the EP mode. When the unit is plugged in, the lights will pulse on and off. This indicates that energy boosting is taking place. When the unit is not plugged in, energy transfer still takes place, but at a reduced level and only at the incoming rate.

For many years, we have seen soil treated with nutrients that are not very effective. People who use the Shield have seen their soil come into full balance within 6 months. They also notice greatly increased crop yields and substantially higher natural sugar content. Uses 1/4 wave antenna, measures 4" x 32".

Price: \$990

Radionic units also available, with a well for broadcasting of any items placed inside.

Model S302W: 4" x 32." Plug-in or self-powered. Covers 5 to 6 acres with plug. **Price: \$1,250**

Small Cosmic Pipe: 3" x 8', self-powered with solenoidal coil to harness energy, covers 35 acres.

Price: \$4,250

Large Cosmic Pipe: 4" x 8', self-powered with solenoidal coil, covers 50 acres. **Price: \$5,200**

Large Cosmic Pipe 4X: 4" x 7', covers 200 acres. **Price: \$6,300**
