

AGRICULTURAL SHIELD

TESTIMONIALS

J.T. of upstate New York wrote to say: "We are in the wine producing area around Niagara Falls. After installing two of your large cosmic pipes we realized a yield increase of our grape production of almost twenty percent. This happened without adding fertilizer to the 100 acres of grapevines. We used a small amount of organic compound in the wells of the cosmic pipes. Thank you for producing the cosmic pipes."

From northeast Georgia, near Sparta, S.H. writes; "The small cosmic pipe has improved the bottom line in our organic truck farm operation. We have a little over ten acres under cultivation growing vegetables for the organic market. It appears that a payoff of the cosmic pipe cost will be about three to four years, judging by the increase in harvest."

In New Zealand, T.L.T has this to say: "As you might understand, I was hesitant to purchase the four large cosmic pipes that we brought in year before last. The cost of the units plus the shipping cost was indeed a sizable investment. We have a dairy operation and grass grubs had infested our grazing area to such an extent that our grassland acreage was totally inadequate. Using a homeopathic compound in the well of the cosmic pipe to eradicate the grass grub, we found in the first year alone an increase of more than 28 percent of grass yield. This is a good product and I am sure you will receive orders from some of our neighbors."

G.Y. in the Bighorn Basin area of northwest Wyoming reports back: "Sugarbeets are a big money crop in this area. I wanted to find a possible solution to control the sugar beet nematode that would supplement crop rotation and lessen the need for pesticides. In May of 2000 I installed a large cosmic pipe in a test plot of 50 acres. I placed a small amount of pesticide in the well (about 1/4 cup) and treated the balance of my crop as usual. The beet yield was significantly higher on the test plot than on neighboring plots. I have done this each year and the results are wonderful. I plan to put in more units."

Upstate Pennsylvania dairy farmer D.S. is happy: "Three years ago when I put the cosmic pipe in, I will admit to being skeptical. Now, after seeing results of increased milk production and higher butterfat content in our milk, I am happy to say it was the right decision. We are enlarging our farm and will need a couple of more units to get the protein content up in the rest of our hayfields."
