# Body Relax II Designed for Back Pain

**NEW**

The Body Relax II was specifically designed for back pain. It includes a main unit and a belt with electrodes that wraps around your torso. It relieves pain by sending electrical impulses through electrodes that are connected to the Belt. These electrodes are manufactured with a special gel that is sticky on both sides. While one side sticks to the Belt the other side sticks to the skin. Due to its easy to use design with 8 computer controlled programs and 8 intensity levels, the Body Relax II has been FDA approved as an OTC device.
