

ALKASTICK

Simple, Convenient and Easy To Use!

Directions:

1. Before using, put stick in a clean bottle filled halfway with purified water. Shake vigorously for 10-20 seconds and discard water. This removes excess loose minerals. Repeat two more times.

2. Now you are ready to use: Place stick in a 16-oz. bottle of purified or mineral water, shake for 10 seconds and leave in for 15-20 minutes before drinking. If using in a glass, stir for 10 seconds and leave in for 5-10 minutes. Larger bottles of water will take longer to alkalize, or use two sticks for faster results. The longer the ionic stick sits in the water, the higher the pH (up to 9.5) and the stronger the negative charge (ORP, or oxygen reduction potential). If the water has a mineral-heavy taste, add more water to dilute.

3. The stick will last for 130-200 gallons depending on water quality and how long you leave it in the water. For maximum stick life, do not leave it in the water unnecessarily. Allow to dry thoroughly and store it in the plastic travel tube.

\$39.95

Specifications:

Height: 5 1/2 inches

Diameter: .67 inches

Weight: 1.6 ounces

Exterior of Stick: #304 stainless steel

Interior of Stick: Tourmaline stone, maifanite, far-infrared stone, and calcium

Available from:

P.O. Box 4158

Santa Fe, NM 87502
