TESTING

Biomagnetic Research, Inc. is the developer of Crystal Catalyst®, an advanced ceramic for radiation altering products.

Our products have been tested in a number of ways since 1985. These tests are replicable.

Crystal Catalyst® products were tested in Canada by a leading international testing laboratory for clean energy. Their testing confirmed our statements that our products are not electrical, magnetic, or radioactive, and they cannot harm electrical appliances, or computer hardware or software.

The electro-magnetic spectrum includes thousands of frequencies which all vibrate the cells of the human body and assist or interfere with cell function and reproduction. All wave lengths produce sound and color. People don't see, feel, or hear most of them, but it is impossible to introduce a new resonance or frequency without affecting already existing tones, and thereby affecting cell function. Our products introduce a resonance which helps create a stress-free harmony that is beneficial to humans.

TESTS CONDUCTED ON CRYSTAL CATALYST®

1. Muscle testing by doctors and other practitioners at Regis College in Denver, Colorado, and at the University of California at Santa Cruz, California, measured the strength of subjects before exposure to electro-magnetic energy, gamma radiations, etc. from T.V.'s and Video Displays.

Subjects were then measured using various E.M.R. shielding devices including Crystal Catalyst® beads and tabs. People were considerably stronger using Crystal Catalyst® in the presence of E.M.R. than they were even before exposure.

2. Use Test: Persons having low immunity to colds, flu, etc. were given a free Bead to wear. Over a period of four years, wearers reported they had increased strength, felt better, and escaped many seasonal illnesses. Subjects wearing a Bead and using a resonator on their monitor when using a computer, report they don't experience the drained feeling that accompanies prolonged exposure to computer radiations.

3. Animal Tests: Beads have been placed on the nylon webbing collars of a number of seriously arthritic goats, dogs of mixed breeds and various sizes, and other animals. One dog terminally ill with renal failure experienced recovery within 24 hours. All animals showed marked improvement and increased stamina. Many of our tests have been done on animals because they don't know what is being done, or expected, and there is no placebo effect.

4. Taste test: A Crystal Catalyst® Bead or resonator placed beneath a cup of unsweetened grapefruit juice, strong coffee, wine, or other acid beverage will change the flavor to more mild within two minutes. The pH changes to more alkaline. Similarly, the pH of water exposed to Crystal Catalyst® becomes more alkaline. This means blood can carry more oxygen to the body.

5. Electro-encephalograph (E.E.G.) Tests: Subjects registered stress and reduced brainwave activity when exposed to electro-magnetic radiations, indicating decreased mental capacity. Wearing a Crystal Catalyst® Bead and using a resonator on the radiation source in double blind tests, they produced stress-free, increased, whole brainwave activity on all levels.

6. Kirlian Photography Tests: Photos were taken by Lawrence Kennedy, PhD. showing the aura (energy field surrounding the body) of a number of subjects before and after contact with Crystal Catalyst® products. These tests were repeated at three other independent laboratories. In every case, the auras of the tested subjects were larger, brighter, and showed a distinct increase in blues and greens after contact with our products. These aura colors are normally present when the body is starting to heal itself.

Dr. Kennedy took energy pictures of subjects during exposure to video display monitors. The subjects' energy fields were reduced within the video display energy field, but showed a distinct increase when a Crystal Catalyst® was worn.

7. Noxious Zone Tests: Subjects working or sleeping over harmful ground radiation zones report improved working conditions and a better night's rest when the annoying zones were cleared with Crystal Catalyst® Resonators. Fractious goats, horses, and cows became calmer in a number of instances when a Bead was attached to their nylon or leather collar, and a Resonator correctly placed in their stall. Tests were made in the dairy state of Wisconsin, where cows were under stress from power line stray voltage. The cows showed general improvement, with increased milk production, increased butterfat in their milk, and less bacteria in their milk. Their behavior improved, and they grazed calmly while in their pasture instead of bunching up in a defensive posture.

8. Specially adapted Crystal Catalyst® Tabs have been shown to alter the energy pattern of cell phone radiations. We have received many happy comments from users.

Since 1985, Crystal Catalyst® products have come to be used throughout the world. Users include workers in an I.B.M. plant, a large Sears complex, the United Nations Building, a trucking company, and electric trains in Europe. Since our only advertising is word of mouth, we think this says something.
