

Frequently Asked Questions About Oxy-Caps Stabilized Oxygen Supplement

Why do you need an oxygen supplement?

Your body needs oxygen, its most vital nutrient, to maintain normal cellular functions and for a host of other important uses. Your body uses oxygen at a very rapid rate. Mental or physical stress, disease, poor diet or lack of exercise can create a need for more oxygen—yet most people don't get enough. The Earth's air used to be almost 40% oxygen, but now it's only about 20% (less at altitude). OXY-CAPS and OXY-MAX give your body extra oxygen to help your body function at its optimum.

Who should use OXY-CAPS?

Most people can benefit from increased oxygen. Typical situations where OXY-CAPS can really help are: high altitude where oxygen is thinner, smoggy or polluted environments, offices or work areas with poor air circulation. Smokers, athletes, seniors and people with special breathing needs can all benefit from increased oxygen.

How much do you need and how does it work?

Most people use 1-2 capsules 2-3 times a day. OXY-CAPS uses a complex biochemical reaction with your stomach's natural acids that produces molecular oxygen.

Does OXY-CAPS work the same as OXY-MAX?

Yes—it produces the same results. Use whichever is more convenient for you—capsules or liquid. One OXY-CAPS capsule is the equivalent of 20 drops of OXY-MAX. Both are guaranteed to increase your bioavailable oxygen.

How are OXY-CAPS and OXY-MAX different from OXY-CLEANSE?

OXY-CAPS and OXY-MAX deliver bioavailable oxygen to cells throughout the body. OXY-CLEANSE is specifically designed to target the upper and lower intestinal tract.

Aren't the OXY-CAPS / OXY-MAX ingredients a form of chlorine?

No. Chlorine is neither an ingredient nor a by-product. In rigorous testing, free chlorine has never been produced by OXY-CAPS or OXY-MAX. OXY-CAPS contains very little sodium.

Are OXY-CAPS and OXY-MAX better than (35%) hydrogen peroxide?

Yes. 35% hydrogen peroxide is not intended for internal use. Hydrogen peroxide is labeled “Food Grade” as an approval for use in cleaning food-handling equipment. Ingesting hydrogen peroxide can cause serious side effects and is listed as a hazardous material. Be extremely careful with any use of hydrogen peroxide.

Are OXY-CAPS and OXY-MAX safe?

Yes—stabilized oxygen has been used by a great number of people for many years. OXY-CAPS and OXY-MAX are produced under the strictest manufacturing procedures and quality control standards.
