All Natural

ENERGY • VITALITY • WELLNESS

Vitality Boost HA

Vitality: n., pl. -ties. 1) exuberant physical vigour; energy; enthusiastic vivacity: *of terrific vitality*. 2) vital force. 3) **the principle of life.**

Manufactured by Morningstar Minerals, Farmington, New Mexico

Vitality Boost HA® is an all-natural, completely organic dietary supplement, chelated from ancient plant matter rich in essential minerals, trace elements and amino acids.

Vitality Boost HA is a rich source of bio-available Fulvic Acid® (FA), Humic Acid® (HA), micro and macro mineral nutrients. The Fulvic and Humic Acids are organic compounds that act as organic mineral carriers and detoxifiers. Research results suggest that Humic and Fulvic Acid complexes enhance mineral and trace element uptake, supporting the maintenance of mineral and trace element balances without harmful buildup in the body's cells. Following dissociation of the minerals and trace elements delivered by the Humic/Fulvic Acid complex, the residual HA/FA complex can chelate heavy metals along the intestinal tract, in turn reducing heavy metal burdens in the digestive system.

The only way the human body can benefit from mineral nutrients is if they are available to be absorbed. Fulvic Acid® enhances this absorption process by enabling minerals to pass through cell membranes. The average plant derived mineral is less than 0.00001 micron in size, conceivably the size of a red blood cell. The body is made up of 100 trillion cells that need constant mineral nutrients to support the energy level for healthy, vigorous life. Fulvic Acid® is the transporter to the body's cells and Humic Acid® is the carrier of minerals, trace elements and amino acids.

WHERE HAVE ALL THE MINERALS GONE?

USDA studies show a 25-80% decline in minerals in the foods we eat. United States Senate Document 264,1936 states the following:

"The alarming fact is that foods, fruits, vegetables, and grains..., now being raised on millions of acres of land no longer contain necessary levels of essential minerals, they are starving us, no matter how much we eat."

The human body's immune system has the innate ability, when supplied the proper essential nutrients, to heal injury and prolong life. However, due to the environment we live in today, our bodies are not getting the nutrition to properly assist the immune system in fighting off disease and maintaining healthy metabolism.

The human body needs a constant source of hydrogen, oxygen, minerals, trace elements, enzymes, and amino acids to repair and properly maintain itself. Our present food supplies are woefully inadequate at delivering these essential life sustaining compounds.

WITHOUT HYDROGEN, OXYGEN & MINERALS WE CANNOT EXIST
